

MediGuide AI – Website UI Redesign

Introduction

MediGuide AI is a medical AI chatbot designed to help users get quick and simple health-related information. The website redesign focuses on creating a clean, modern, and user-friendly interface.

The main goal of this redesign is to improve the overall user experience by making the navigation simple, the content easy to understand, and the interface visually attractive. The design is created for both desktop and mobile users.

The redesign process includes research, mood board creation, style guide development, desktop high-fidelity mockup, and mobile high-fidelity mockup.

Design Goals

- Create a clean and professional medical interface.
- Make navigation simple and easy to understand.
- Improve readability and visual hierarchy.
- Use a consistent blue and white healthcare theme.
- Provide a responsive experience for desktop and mobile users.
- Make the chatbot interface simple and comfortable to use.

Design Process

1. Research

The existing MediGuide AI website was reviewed to identify areas that could be improved in terms of layout, navigation, readability, and user experience.

2. Mood Board

A mood board was created to define the visual direction of the redesign, including healthcare-related images, colors, icons, and design inspiration.

3. Style Guide

A style guide was created to maintain consistency in colors, typography, buttons, icons, cards, spacing, and other UI elements.

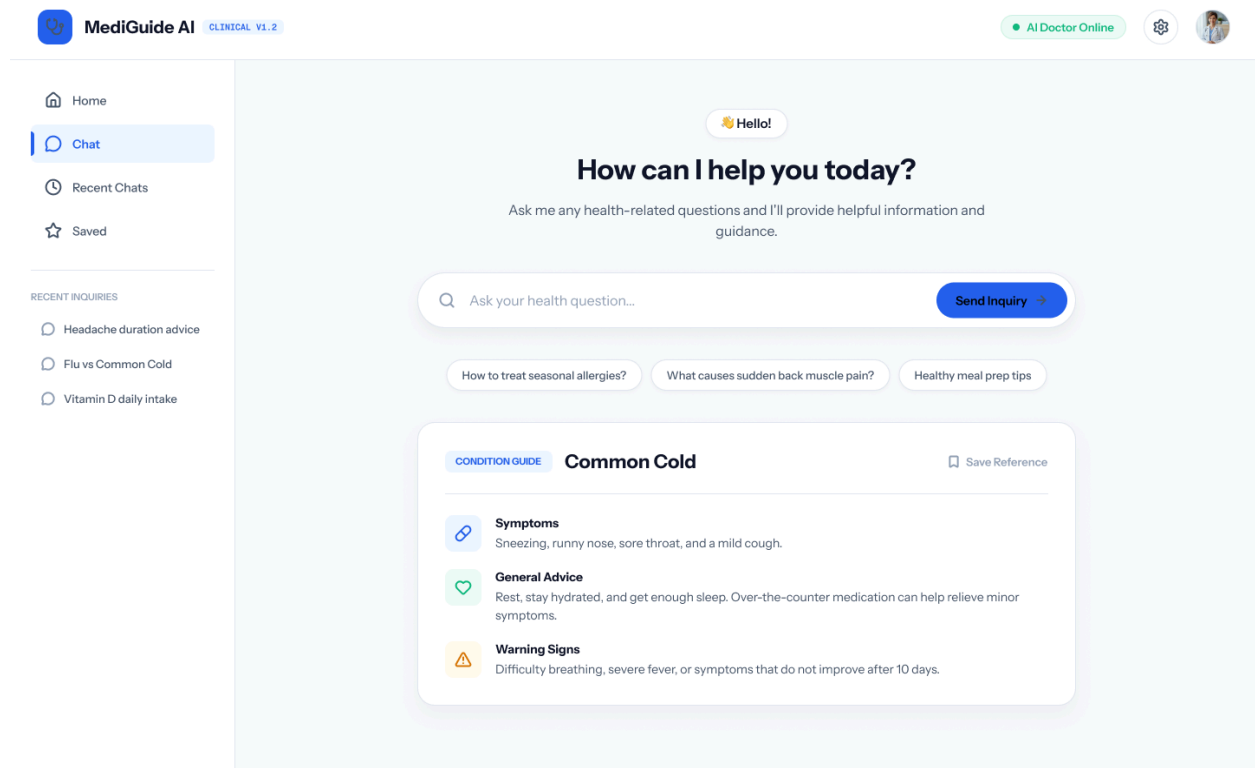

4. Desktop High-Fidelity Mockup

A complete desktop interface was designed with a navigation sidebar, header, chat area, input field, send button, and medical information card.

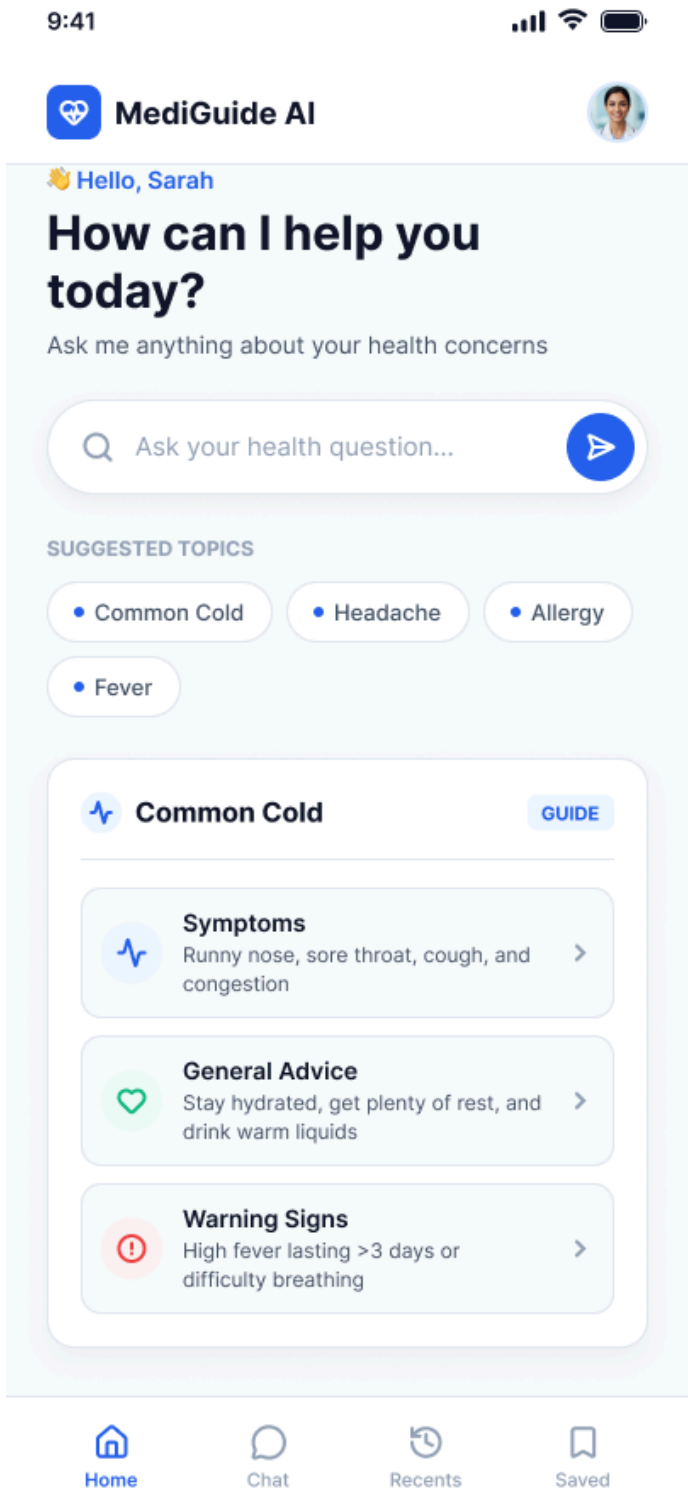

5. Mobile High-Fidelity Mockup

A responsive mobile interface was created with mobile-friendly navigation, quick question buttons, chat input, medical information cards, and bottom navigation.

Desktop Mockup

Mobile Mockup

Final Outcome

The redesigned MediGuide AI website provides a cleaner, more modern, and user-friendly experience. The new design improves navigation, readability, visual consistency, and responsiveness across desktop and mobile devices.
